BioSystems, 29 (1993) 161–162
Elsevier Scientific Publishers Ireland Ltd.

Subject Index

Volume 29

Activator, inhibitor, cross-diffusion, global stability, 25
Archaebacteria, *Thermoplasma acidophilum*, cytoskeleton (origin, evolution), viscometry (rolling ball), 151

Bacteria uptake in cell cultures, interspecies gene transfer, poliovirus, 37
Bacterial promoters, gene regulation, linguistic formalization, 87
Bacterial promoters, linguistic formalization, gene regulation, 105
Biological clocks, chaos, circadian clock, ultradian clock, cell division cycle, biological rhythms, *per* mutation in *Drosphila*, *frq* mutation in *Neurospora*, 77
Biological rhythms, chaos, circadian clock, ultradian clock, cell division cycle, biological clocks, *per* mutation in *Drosphila*, *frq* mutation in *Neurospora*, 77
Boolean algebra, boolean logic, cytoskeleton, logic, microtubules, microtubules associated proteins, molecular computation, cellular automata, 1
Boolean logic, boolean algebra, cytoskeleton, logic, microtubules, microtubules associated proteins, molecular computation, cellular automata, 1

Cell differentiation, origin of multicellularity, volvox, lower metazoa, protistan evolution, 129
Cell division cycle, chaos, circadian clock, ultradian clock, biological clocks, biological rhythms, *per* mutation in *Drosphila*, *frq* mutation in *Neurospora*, 77
Cellular automata, boolean logic, boolean algebra, cytoskeleton, logic, microtubules, microtubules associated proteins, molecular computation, 1
Chaos, circadian clock, ultradian clock, cell division cycle, biological clocks, biological rhythms, *per* mutation in *Drosphila*, *frq* mutation in *Neurospora*, 77
Circadian clock, chaos, ultradian clock, cell division cycle, biological clocks, biological rhythms, *per* mutation in *Drosphila*, *frq* mutation in *Neurospora*, 77
Cnidaria, symbiogenesis, cnidocytes, myxosporidia, dinoflagellates (predatory), 49
Cnidocytes, symbiogenesis, cnidaria, myxosporidia, dinoflagellates (predatory), 49
Codon number, genetic code evolution, prebiotic amino acids, hairpin oligonucleotides, stacking, codon usage, purine bias in early RNAs, 133
Codon usage, genetic code evolution, codon number, prebiotic amino acids, hairpin oligonucleotides, stacking, purine bias in early RNAs, 133
Computational models of the cell, levels of organisation, systemic metaphors, 63
Cross-diffusion, activator, inhibitor, global stability, 25
Cytoskeleton (origin, evolution), *Thermoplasma acidophilum*, archaebacteria, viscometry (rolling ball), 151
Cytoskeleton, boolean logic, boolean algebra, logic, microtubules, microtubules associated proteins, molecular computation, cellular automata, 1

Diffusion, insulin, oscillations, morphological dynamics, 143
Dinoflagellates (predatory), symbiogenesis, cnidocytes, cnidaria, myxosporidia, 49

frq mutation in *Neurospora*, chaos, circadian clock, ultradian clock, cell division cycle, biological clocks, biological rhythms, *per* mutation in *Drosphila*, 77

Gene regulation, bacterial promoters, linguistic formalization, 87
Gene regulation, linguistic formalization, bacterial promoters, 105
Genetic code evolution, codon number, prebiotic amino acids, hairpin oligonucleotides, stacking, codon usage, purine bias in early RNAs, 133
Global stability, activator, inhibitor, cross-diffusion, 25

Hairpin oligonucleotides, genetic code evolution, codon number, prebiotic amino acids, stacking, codon usage, purine bias in early RNAs, 133

Inhibitor, activator, cross-diffusion, global stability, 25
Insulin, oscillations, morphological dynamics, diffusion, 143
Interspecies gene transfer, poliovirus, bacteria uptake in cell cultures, 37

Levels of organisation, computational models of the cell, systemic metaphors, 63
Linguistic formalization, bacterial promoters, gene regulation, 87
Linguistic formalization, gene regulation, bacterial promoters, 105
Logic, boolean logic, boolean algebra, cytoskeleton, microtubules, microtubules associated proteins, molecular computation, cellular automata, 1
Lower metazoa, origin of multicellularity, volvox, cell differentiation, protistan evolution, 129

Microtubules associated proteins, boolean logic, boolean algebra, cytoskeleton, logic, microtubules, molecular computation, cellular automata, 1
Microtubules, boolean logic, boolean algebra, cytoskeleton, logic, microtubules associated proteins, molecular computation, cellular automata, 1
Molecular computation, boolean logic, boolean algebra, cytoskeleton, logic, microtubules, microtubules associated proteins, cellular automata, 1
Morphological dynamics, insulin, oscillations, diffusion, 143
Myxosporidia, symbiogenesis, cnidocytes, cnidaria, dinoflagellates (predatory), 49

Origin of multicellularity, volvox, lower metazoa, cell differentiation, protistan evolution, 129
Oscillations, insulin, morphological dynamics, diffusion, 143

per mutation in *Drosphila*, chaos, circadian clock, ultradian clock, cell division cycle, biological clocks, biological rhythms, *frq* mutation in *Neurospora*, 77
Poliovirus, interspecies gene transfer, bacteria uptake in cell cultures, 37
Prebiotic amino acids, genetic code evolution, codon number, hairpin oligonucleotides, stacking, codon usage, purine bias in early RNAs, 133
Protistan evolution, origin of multicellularity, volvox, lower metazoa, cell differentiation, 129
Purine bias in early RNAs, genetic code evolution, codon number, prebiotic amino acids, hairpin oligonucleotides, stacking, codon usage, 133

Stacking, genetic code evolution, codon number, prebiotic amino acids, hairpin oligonucleotides, codon usage, purine bias in early RNAs, 133
Symbiogenesis, cnidocytes, cnidaria, myxosporidia, dinoflagellates (predatory), 49
Systemic metaphors, computational models of the cell, levels of organisation, 63

Thermoplasma acidophilum, archaebacteria, cytoskeleton (origin, evolution), viscometry (rolling ball), 151

Ultradian clock, chaos, circadian clock, cell division cycle, biological clocks, biological rhythms, *per* mutation in *Drosphila*, *frq* mutation in *Neurospora*, 77

Viscometry (rolling ball), *Thermoplasma acidophilum*, archaebacteria, cytoskeleton (origin, evolution), 151
Volvox, origin of multicellularity, lower metazoa, cell differentiation, protistan evolution, 129

BioSystems, 29 (1993) 163
